2 mark q.

1. Define token ? list tokens in ‘C’?
2. State different data types supported by ‘C’ language.
3. State any four data type in’C’.
4. Enlist ‘C’ Keyword.
5. Define term Operator. Also give example.
6. Explain formatted input and output in brief.
7. State use of %c,%d,%f in ‘C’ program.Write print statement in’C’ using above symbol.
8. Write syntax to declare array of structure.
9. Explain the data type in C++.
10. Define data structure.
11. Explain basic concept of stack with example.
12. Explain basic concept of queue with example.
13. Explain History of ‘c’.
14. Explain any two decision making statements.
15. Draw flowchart and Algorithm of If-Else Statement.
16. Explain five data type in c programming lang.
17. Explain all Arithmetic operators.
18. Define the call by value and call by reference.
19. Define Function in ‘c’.
20. Define Array and Linked List.
21. Explain list of sorting
22. Explain basic concept of stack.
23. Explain types of inheritance.
24. Explain the data type in C++.

4 **mark q**

1. Write a program to display even number from 1 to n where n is accepted from user.
2. Explain the representation of two dimensional array with example.
3. Write a program to multiply and addition two(2*2) matrices.
4. Distinguish between call-by-value call-by-reference.(8 point)
5. Give syntax and example for switch case statement.
6. Define Abstract data type(ADT) ? & what is use of data structure.
7. Define function .Explain user define function with sutaible example.

8. Difference between C and C++(8 Point).
9. Define flowchart ? draw flowchart for following algorithm
    1) Start
    2) Read the values for b(base) & H(height)
    3) Calculate area =1/2 *B*H
    4) Display area
    5) Stop
10. Define Abstract data type ? & what is use of data structure.
11. Write a program to find the greatest among three number.
12. Why one should use goto statement in ‘c’ Programming language with suitable example.

7 mark q

1. Explain what is structure? and syntax of structure with example.
2. What will be the output of following program :

```
#include<stdio.h>

void main()

{

int suite=0;

switch(suite)

{

case 0;

printf(“club”);

case 1;

print(“diamond”);

}

getch();

}
```

3. Write a program in C++ to swap Two number.
4. Describe the example classification of data structure.
5. Explain ‘goto’ statement of C with its syntax and write example.

6. Write a program to display following menu and do operation as per user choice. Using switch case:
    I. Addition
    II. Subtraction
    III. Multiplication
7. classification of data structure And Describe with example.
8. Writhe a Program to find count of even number,count of odd number with out put.
9. Explain all library function in brief.
10. Describe the Object Oriented Programming features of C++?
11. Expain advantages of array in ‘c’.(8 point)
12. How many types of loop? Define all loops and with example.

12 Mark q

1. Write a program to declare the structure student having data member variables as rollno, name,marks. Accept the data for 5 students and display it.
2. Distinguish between C and C++.(12 point).
3. Draw flowchart & algoritham of nested if else statement or write a any menu driven program using if-else statement.
4. Syntax of 2D array &write a program to find multiplication of two by two matrix element
5. Draw flowchart of switch case statement & write a any menu driven program using switch case statement.
6. Draw flowchart & algoritham of nested if else statement or write a any menu driven program using if-else statement.
